Appl. No. 10/080,574

Amdt. dated October 20, 2005

Reply to Office Action of July 27, 2005

Amendments to the Specification:

JDK 9126

line to line 10, with the following rewritten paragraph:

Below is an example of creating/editing Device Expert

Startup (*.ini) files for an NT expert. These files tend to have the same basic format from one device expert to another, although there are some variations, particularly for customized experts (experts that don't deal with standard text event streams). The example below is fairly typical - Standard name/value strings define such things as which translator, rule, and other configuration files to use. Other parameters tell the device expert how big event log files should be allowed to get, sampling rates, etc.

Please replace the paragraph extending from page 16,

GUNNISON, McKAY & HODGSON, L.L.P. Garden West Office Plaza 1900 Garden Road, Soite 220 Monter ey. CA 93940 (831) 655-0880 Fax (831) 655-0888
